BEHIND THE SCENES

When you render a document, Quarto:

- 1. Runs the code and embeds results and text into an .md file with: **Knitr**, if any {r} cells or, Jupyter, if any other cells.
- 2. Converts the .md file into the output format with Pandoc.

CODE CELLS

Code cells start with ```{language} and end with ```.

Use Insert Code Chunk/Cell

```{r} #| label: chunkID library(tidyverse)

```{python} #| label: chunkID import pandas as pd

Other languages: {julia}, {ojs}

Add code cell options with # | comments.

Cell options control **execution**, figures, tables, layout and more. See them all at: https://quarto.org/docs/reference/cells

| echo | true | false: hide code
fenced: include code cell syntax |
|---------|-------|---------------------------------------------------------------------|
| eval | true | false: don't run code |
| include | true | false: don't include code or results |
| output | true | false: don't include results
asis: treat results as raw markdown |
| warning | true | false: don't include warnings in output |
| error | false | true: include error in output and continue with render |

Set execution options the **cell level**:

```
```{r}
                           ```{python}
#| echo: false
                           #| echo: false
Or, globally in the YAML header with the execute option:
                           Set options in code
                           cells with #|
execute:
                           comments and YAML
  echo: false
                           syntax:
                           key: value
```

INLINE CODE

Use computed values directly in text sections. Code is evaluated at render and results appear as text.
